Steel structures, in general, require only the detailed design of connections. For concrete structures, we must determine not only the area of longitudinal and lateral reinforcement required in each member, but also the way to best arrange and connect the reinforcement to insure acceptable structural performance.

Design of reinforced concrete structures. The material is presented in such a manner that the student can be familiarized with the properties of reinforced concrete and its components. Large prolific number of analysis and design examples are included which can avail well both of the students and the practicing engineers.
