A typical machine consists of the base including the table on which the lower blade is fixed, the rotary guillotine on which the upper blade is fixed, two hydraulic rams operating the guillotine at either side and hinges between base and guillotine, see Fig.1.

STRUCTURAL IMPROVEMENT OF HYDRAULIC SHEARING MACHINE

STARTUP OF GUILLOTINE SHEARING MACHINE. Preparation of hydraulic shearing machine. Remove the squaring arm and foot pedal from handguard area. Set up the squaring arm on the left-hand side (Close to electrical panel) by bolting down to the shearing machine table and two side holes.

Hydraulic Guillotine Shears Operation Manual | MachineMfg.com

A hydraulic circuit is a group of components such as pumps, actuators, control valves, conductors and fittings arranged to perform useful work. There are three important considerations in designing a hydraulic circuit: 1. Safety of machine and personnel in the event of power failures. 2. Performance of given operation with minimum losses.

Lecture 24 HYDRAULIC CIRCUIT DESIGN AND ANALYSIS

Hydraulic Guillotine. This machine is different from the traditional driving method of mechanical and Hydraulic Guillotines. Itâ€™s adopted hydraulic driving, low cutting angle and included shearing direction to reduce bowing and twisting to minimum. Blade clearance is easily set by a manually operated â€œQuick setâ€• device. Based on special hydraulic...

The hydraulic hold-downs work indepen- dently, which makes it possible to clamp plates of different lengths and thickness correctly. The hold-downs operate inde- pendently from the shearing pressure. On the left and the right hand side of the machine the hold-downs are arranged more closely to allow cutting small plates without any problems.

Figure 5.4 shows a circuit used to control a double â€“ acting hydraulic cylinder. When the four way valve is in centered configuration , the cylinder is hydraulically locked as the ports A and B is blocked.

HYDRAULIC CIRCUIT DESIGN AND ANALYSIS

(Cl. 60-52) This invention relates to guillotine type paper cutting machines and more particularly to machines

which use a hydraulically operated clamp. It is an object of the invention to provide a hydraulically operated clamp capable of rapid descent to the point of contact with a paper pile followed by subsequent heavy pressure application to the pile.
