Linear Algebra with Applications (Steven Leon)

Linear algebra with applications - Steven J. Leon. An $n \times n$ matrix A is nonsingular if and only if the column vectors of A form a basis for \mathbb{R}^n . Proof: It follows from Theorem 3.6.3 that the column vectors of A form a basis for \mathbb{R}^n if and only if for each $b \in \mathbb{R}^n$ the system $Ax = b$ has a unique solution.

A linear equation in 3 unknowns represents a plane in three space. The solution set to a 3 \times 3 linear system would be the set of all points that lie on all three planes. If the planes are parallel or one plane is parallel to the line of intersection of the other two, then the solution set will be empty.
